MRI Contrast Pre-Screen

Have you ever had a contrast injection for MRI before? _____

Are you pregnant? _____

Do you have a history of kidney disease, impaired renal function, or kidney failure? _____

Are you undergoing dialysis? _____

Single kidney? _____

Kidney transplant? _____

Sickle Cell Anemia? _____

Liver transplant? _____

Are you taking blood thinners (coumadin, heparin, etc.) _____

Do you have a bleeding disorder? _____

Are you allergic to latex? _____

Studies indicate that the use of gadolinium may increase the risk of nephrogenic systemic fibrosis (NSF) in patients with acute or chronic severe renal insufficiency (glomerular filtration rate less than mL/min/1.73m²) or acute renal insufficiency of any severity due to the hepato-renal syndrome or in perioperative liver transplantation period. The patient has the right to refuse contrast, or postpone the exam to obtain GFR testing.
